

HORMOTEX silver coated Pills

Nowadays more and more products can be found in the market against erectile dysfunction, especially since Pfizer made a billion Dollar business with Viagra and Co. It did not take long for Indian companies (and others) to produce fakes, some of them with correct ingredients, some of them with hazardous chemicals and foul imitations. Even more dangerous side effects can be found than in the original Viagra, which causes problems from drowsiness to heart failure.

Beware of imitations! Where money can be made so easily even sawdust will do the job.

We have been producing HORMOTEX silver coated pills since 1976 and since then they are used in many countries worldwide. Some countries consider them as pharmaceuticals, others as dietetic supplement, due to the natural nature of the ingredients.

Let us have a look at the ingredients:

- **Yohimbe** is used to arouse sexual excitement, for erectile dysfunction (ED), sexual problems caused by medications for depression called selective-serotonin reuptake inhibitors (SSRIs), and general sexual problems in both men and women. It is also used for **athletic performance, weight loss, exhaustion**, chest pain, high blood pressure, low blood pressure that occurs when standing up, diabetic nerve pain, and for **depression** along with certain other medications.
- **Muir Puama** is a plant that has been used for many years to help with increasing energy, improving overall health, and helping with impotence and lack of sexual desire. This plant seems to have many stimulating properties which not only helps the body become more aware but also acts as an aphrodisiac to increase sexual desire and pleasure.
- Since ancient times, the indigenous peoples of South America have used the bitter-sweet leaves of **Damiana** as an aphrodisiac and for the smooth sedative effects.
- **Vitamins** round up the healthy content of Hormotex.

Still you must be aware; an active product like HORMOTEX may have some undesirable effects on some patients, if they take more than 3 pills, they may not go to sleep easily. But do they want to? Activation of blood pressure is wanted – or not?

As a general rule, take HORMOTEX pills 1 to 2 hours before you want to enjoy your sexual life. It takes a bit longer to act but will work smoothly over a long time. The pleasure is longer – you will generally feel fit for action.

HORMOTEX has been helping loving people for so long already – nature is best to know how this works without regret!

Stay firm and say yes to HORMOTEX!
